INDOOR USE

Ø38 LED Mini Tube

LED Mini Tube AWB is a newly developed lighting fixture which incorporates Amber, (WLED) White, and Blue LED technology. By mixing amber, white and blue colors, you can adjust the Color Correlated Temperature (CCT) to achieve a full spectrum of cool to warm white.

Similar in structure to the AWB color mixing version of the Ø38 LED Mini Tube, however the Ø38 LED Mini Tube SC (A/W/B) is available in singe color. Ø38 LED Mini Tube SC version make perfect linear single color illumination in Amber, Cool White, Warm White, Ultra Warm White, or Blue colors.

The New, Warm White and Ultra Warm White versions of the LED Mini Tube SC provide energy saving warm and "true" incandescent white light to applications that once were limited to high energy consuming incandescent and halogen based illumination.

Ø38 LED DMX Mini Tube AP RGB is the latest full color energy savings LED linear Tube solution designed for professional color changing projects. Ø38 LED DMX Mini Tube AP RGB can be controlled via any standard DMX-512 controller with 3, 4, and 5 channel configurations as well as the SRC-Pixdot-PC control system.

Ø38 LED DMX Mini Tube AP RGB is constructed of a professional extruded aluminum profile with an optically clear polycarbonate cover and professional mounting system. The Ø38 LED DMX Mini Tube AP RGB comes in 3 standard lengths which are 300, 600, and 1000mm.

(Custom Colors available upon request)

Connection Diagram

We have provided a connection on this page diagram to help you make the appropriate connections.

- Connect the signal wire of DMX console or SRC-PIXEL-PC with signal distribution box SRC-PS-DST-12V-1110
- Connect the input port of each branch of the signal distributing box with 4-pin male connector
- Connect the LN-MN-ø38X300 -12V-AWB to the signal distribution as shown in the diagram ensuring that the 4-pin male connector is inserted into the 4-pin female connector

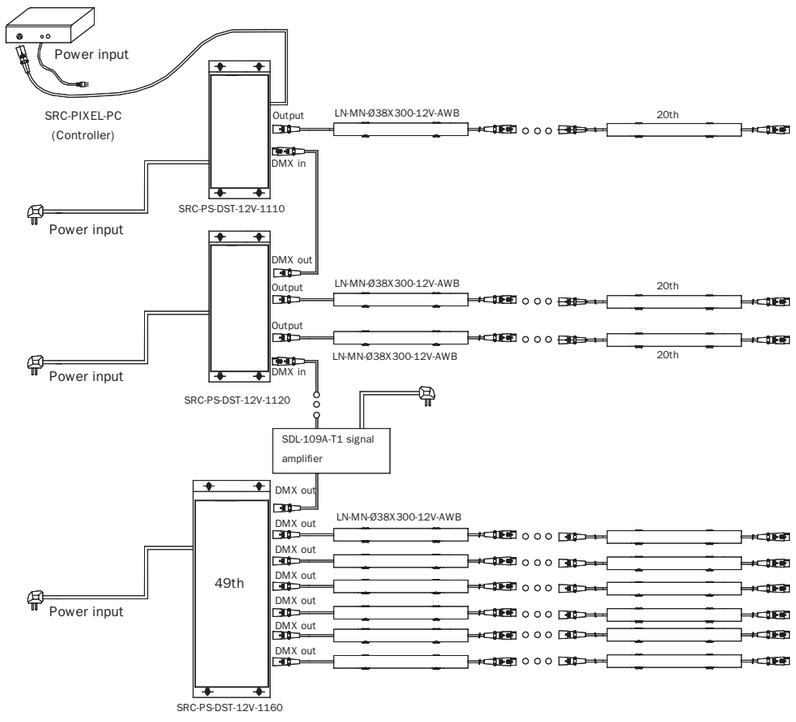
Note:
Maximum number of LN-MN-ø38X300 -12V-AWB that can be connected to each branch of the signal distribution box is 20. Maximum number of LN-MN-ø38X600 -12V-AWB that can be connected to each branch is 10.
When the total number of tubes reaches 48 a signal amplifier SDL-109A-T1 must be added.
When using the SRC-Pixel-PC controller the tube dip mode must be set so that the fixture is operating in 3 channel mode.

Refer to the user manual supplied with your product for the latest information and read all warnings and cautions prior to proceeding with the steps above.

For DMX Control you will also need to purchase the SRC-PS-DST-12V-1160 Signal Distribution Box. For large applications you will need to boost the signal using the SDL-109A-T1 Signal Amplifier. (See Page# P414-419 of this catalog for more information)

SRC-PIXEL-PC Control Accessories

For SRC-PIXEL-PC Control you will also need to purchase the SRC-PS-DST-12V-1/20 Signal Distribution Box. For large applications you will need to boost the signal using the SDL-109A-T1 Signal Amplifier. (See Page# P414-419 of this catalog for more information)



INDOOR USE OUTDOOR USE CE

LED Mini Tube

(Indoor / Outdoor Non-Direct DMX)

LED Mini Tube is an energy saving, lower cost, Non-Direct DMX controlled, outdoor, low voltage, linear RGB color changing accent and cove fixture. Connected to the SRC-181 controller power supply controller the LED Mini Tube can be set to playback selectable pre-programmed color changing transitions automatically. Connect the SRC-181 controller to a standard DMX console to indirectly control the LED Mini Tube via the SRC-181.

LED Mini Tube is a non-intelligent fixture which means all functionality is provided by the controller and external interfaces. For more information on the SRC-181 refer to Page# P414-419 of this catalog.

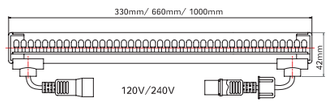
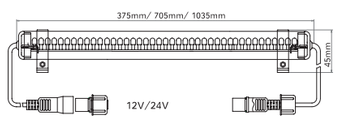
LED Mini Tube I-ND-DMX comes in two styles as it pertains to the exit and entry location of the connection wires. To specify the type make sure your part number reflects a –M or a –MB at the end of the part number according to the diagrams below.

1 Method one (LN-MN-XXX -M Type)
Connectimg cables come from the ends of the tube.



2 Method two (LN-MN-XXX–MB Type)
Connectimg cables come from the bottom of the tube.



(W) at the end of the part number indicates Waterproof Version
If the part number does not contain a (W) then that version is intended for indoor use only.

LED Mini Tube CCT 1

(Non-Direct DMX)
(Changeable Color Temperature)

LED Mini Tube CCT 1 is an energy saving, color temperature changing, white light, indoor, linear, LED based tube product. The LED Mini Tube CCT 1 is low voltage and can be operated in standalone mode via the SRC-181-CTC controller power supply. The SRC-181-CTC comes in 120V or 220V AC and 12V or 24V DC. Additionally you can connect the SRC-818-CTC to DMX-512 to provide non-direct DMX control.

The LED Mini Tube CCT 1 enables the adjusting of the White color temperature rated in Kelvin by bringing in and our varying degrees of Yellow. Many customers apply the LED Mini Tube CCT 1 as a under cabinet solution for illuminating fine artwork, antiques, clothing, and articles where warming the whiter light preserves the intended natural color of the illuminated objects. Other applications include cove, architectural, tradeshow exhibits, and areas where color correction of white light illumination is desired.
Dimensional Diagram

LED Mini Tube CCT 1 is a non-intelligent fixture which means all functionality is provided by the controller and external interfaces. For more information on the SRC-181-CTC refer to Page# 414-419 of this catalog.

The two button user interface and LED display makes it easy for customers to individually “dial in” the desired color temperature for each tube.

This interface is located on the rear of the tube.

INDOOR USE

pending

LED Mini Tube CCT 2

(Non-Direct DMX)
(Changeable Color Temperature)

LED Mini Tube CCT 2 is an energy saving, color temperature changing, white light, outdoor, linear, LED based tube product with built in control system and LED menu interface.

The main difference between CCT 1 and CCT 2 versions is the location of the connections and controllability. The CCT 2 connections are located on the ends of the tube whereas the CCT 1 version exits the bottom ends of the tube profile. the CCT 2 incorporates an intelligent two button user interface and LED display that enables the user to dial in the desired color temperature individually without the need for a DMX controller. This has significant benefits for applications where customers may be unfamiliar with DMX and where the color temperature needs to be individually controlled to preserve the illuminated surfaces natural color.

The LED Mini Tube CCT 2 enables the adjusting of the White color temperature rated in Kelvin by bringing in and our varying degrees of Yellow. Many customers apply the LED Mini Tube CCT 2 as a under cabinet solution for illuminating fine artwork, antiques, clothing, and articles where warming the whiter light preserves the intended natural color of the illuminated objects. Other applications include cove, architectural, tradeshow exhibits, and areas where color correction of white light illumination is desired.

LED Clear Oval RGB Tube

(Outdoor)
(Non-Direct DMX)

LED Clear Oval RGB tube is another of Neo-Neon's most popular LED Tube products. LED Clear Oval RGB tube is an energy saving RGB LED color changing tube that is engineered with either a clear polycarbonate tube or aluminum profile base with clear PC cover. Through the process of light refraction one beam with an illumination angle of 100° is projected to the inner surface of the clear cap. The oval tube structure assures a wider viewing angle. LED Clear Oval RGB tube is a non-direct DMX controllable product and requires a external controller which can be operated in stand-alone or with DMX-512 to playback pre-programmed color changing and effects.

LED Vision Tube

LED Vision Tube (1M) is an advanced tube design and the latest version of the LED Tube from Neo-Neon.

The LED Vision Tube is a video grade tube and can be set to 8, 16, 32 pixel resolutions per tube.

The LED Vision Tube uses the very latest in high quality tri-color (RGB) LED's to provide high luminosity even and consistent colors.

The LED Vision Tube can be directly controlled by DMX-512 or our PC Video Control System.

Future Compatibility with Vision Studio MX control hardware and software.

Functions:

Color Change:	Function Description
	Color change, color flow and color chase
	Color fade changes
	Motion picture effect
	Video play

Theory Description

The product uses LED as light source, which projects light beams with an angle of 100o to the inner surface of the Polycarbonate tube structure. The light passes through the outer surface of the tube to form mixed color light after several reflections and refractions. The LED Vision Tube is connected to standard VIDEO signals and controlled by an independent VIDEO control system.

LED DMX Tube

LED DMX Tube is an advanced tube design and the latest version of the LED Tube from Neo-Neon.

The LED DMX Tube is a graphics and color changing grade tube that can be set to 1, 2, 4, 8, and 16 pixels per tube. LED DMX Tubes come in half meter (500mm) and 1 meter versions.

The LED DMX Tube uses the very latest in high quality (RGB) LED's to provide high luminosity even and consistent colors.

The LED DMX Tube can be directly controlled by DMX-512, PC Graphics Control, or a stand-alone graphics playback system.

PC or Stand-alone Matrix Connection

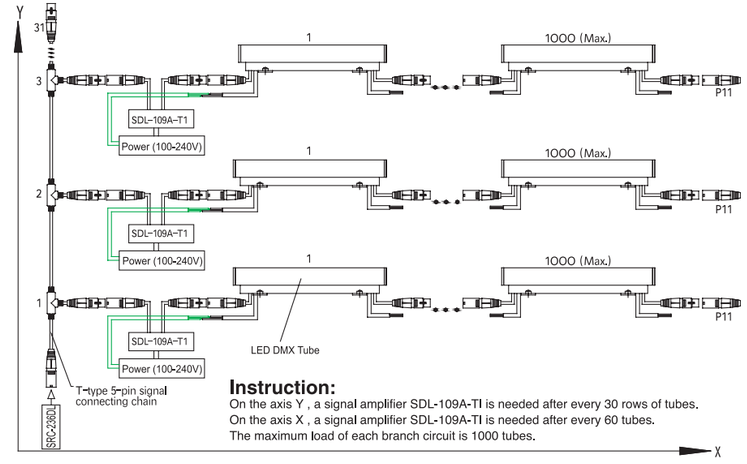
This configuration requires the additional hardware listed below:
SRC-236DL Controller –or- SRC-236DL Controller and PC SDL-109A-T1 (Qty based on total number of tubes)

DMX-512 Control
This configuration requires the additional hardware listed below:
Standard DMX-512 Controller
SDL-109A-T1 (Qty based on total number of tubes).

LED DMX Tube is an intelligent fixture and under certain configurations requires external controllers and signal amplifiers for their operation and installation. For more information on these devices refer to the appropriate pages in this catalog listed below:

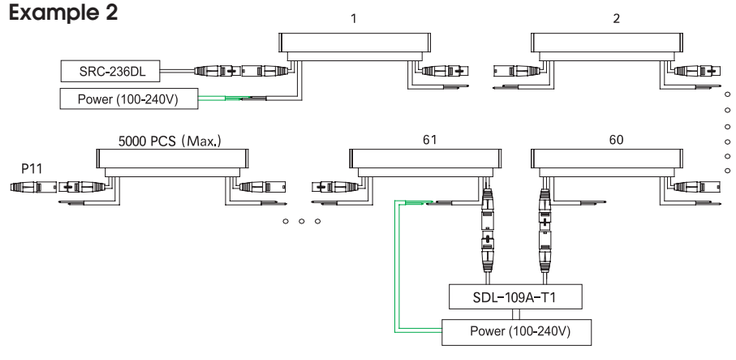
SRC-236DL Controller Page# P414-419.
SDL-109A-T1 Page# P414-419.

Example 1



Instruction:
On the axis Y , a signal amplifier SDL-109A-TI is needed after every 30 rows of tubes.
On the axis X , a signal amplifier SDL-109A-TI is needed after every 60 tubes.
The maximum load of each branch circuit is 1000 tubes.

Example 2



LED Multicolor ND DMX Tube

(Non-Direct DMX)

LED Multicolor ND-DMX Tube is energy savings, multi-color LED, non-direct DMX, controllable, outdoor, tube product. LED Multicolor ND-DMX Tubes are designed for stand-alone applications or by direct DMX control of the SDL-109C1 6.0A controller (sold separately). Whether in stand-alone or mode or under DMX control the LED Multicolor ND-DMX Tubes produce vivid color changing effects, chasing, strobing and other exciting effects.

LED Multicolor ND-DMX Tubes come in either high voltage or low voltage versions and can be applied both indoors and out. High voltage versions of the LED Multicolor ND-DMX Tubes require no additional power supplies.

LED Multicolor ND-DMX Tube is a non-intelligent fixture which means all functionality is provided by an external controller SDL-109C1 6.0A. For more information on the SDL-109C1 6.0A refer to Page# P502-507 of this catalog.

LED 7 Color Tube

LED 7 Color Tube is a comparatively simple LED Tube solution for applications where single color changes between 7 colors are all that is required. Energy savings and cost effect for simple 7 color applications from the RGB LED's incorporated into a Milky PC tube. The 50mm diameter version is mounted on a aluminum channel and the 80mm diameter version is fashioned with metal suspension brackets.

The LED 7 Color Tubes are controlled by Neo-Neon's proprietary SRC-181 controller. (Sold separately) For more information on the SRC-181 refer to Page# 414-419 of this catalog.

Functions

Static Colors: Red, Green, Yellow, Blue, Purple, Fluorescent Green, White (single color vision)

Change Color: Color counterchange
Color twinkle
Gray scale change

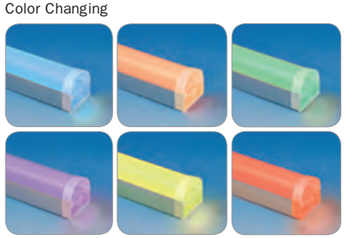
LED Border Light

(Non-Direct DMX)

Color Changing



INDOOR USE OUTDOOR USE pending

LED Border Light is a low cost, energy savings, LED based product that incorporates 2, 3, and 4/5 wire LED Duralight™ into a aluminum mounting profile and milky white PC cap to simulate an LED Tube Effect. The aluminum mounting track is designed to fit perfectly with the 4/5 wire LED Duralight™ single color, RGB, RGBY, and single color versions.

LED Border Light comes standard in premade (1-Meter) sections with molded end caps and connectors or supplied as individual linear sections of 2, 3, 4/5 wire LED Duralight™, Aluminum Profile Channel, Milky White PC Cap, and mounting hardware. Custom Lengths of premade versions are available to your specification.

LED Border Light 4/5 wire versions require a separate controller. There are two types of controllers available for the 4./5 wire versions. The SL-410 simple controller provides (7) pre-programmed color changing effects. For more information on the SL-410 controller see Page# 502-507 of this catalog.

Depending on your application the 4 wire RGB version LED Border Light can be controlled via the SRC-181-V2.0 / SRC-191 which provides full RGB color mixing and adds DMX 512 controllability. For more information on the SRC-181-V2.0 / SRC-191 functionality and DMX profile see Page# 502-507 of this catalog.

Features and Benefits

- Energy Savings (Up to 80% energy saved compared to incandescent lighting)
- Long life LED technology (up to 100,000 hours)
- Comes in standard 1M complete sections for ease of installation
- Premade LED Border Light can be made to your desired length
- Utilizes 2, 3, 4/5 Wire LED Duraflex™ as the light source
- Anti-UV Protected Milky White Cap
- Easy to install Aluminum Channel Profile
- Waterproof (IP65)
- Virtually maintenance free
- Seamless linear border effect (Linear non-premade type)
- Single Color, RGB, RGBY
- As bright as glass neon and LED Tubes
- Unbreakable

Double Diffusion Effect

When applying both the LED Duralight™ 4/5 wire with Milky White PVC jacket and the Milky White PC Cap a double diffusion effect is achieved which proved even greater smoothness and light consistency.

Controllability

LED Border Light 4/5 wire versions require a separate controller. There are two types of controllers available for the 4./5 wire versions. The SL-410 simple controller provides (7) pre-programmed color changing effects. For more information on the SL-410 controller see Page# 414-419 of this catalog.

LED Border Light comes standard in premade (1-Meter) sections with molded end caps and connectors or supplied as individual linear sections of 2, 3, 4/5 wire LED Duralight™, Aluminum Profile Channel, Milky White PC Cap, and mounting hardware. Custom Lengths of premade versions are available to your specification.

LED Border Light 4/5 wire versions require a separate controller. There are two types of controllers available for the 4./5 wire versions. The SL-410 simple controller provides (7) pre-programmed color changing effects. For more information on the SL410 controller see Page# 414-419 of this catalog.

Depending on your application the 4 wire RGB version LED Border Light can be controlled via the SRC-181-V2.0/SRC-191 which provides full RGB color mixing and adds DMX 512 controllability. For more information on the SRC-181-V2.0 / SRC-191 functionality and DMX profile see Page# 414-419 of this catalog.

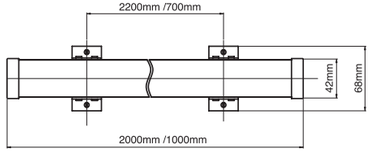
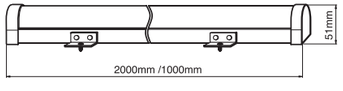
LED Border RGB 5-Wire Standard Type

(Contact your Sales Associate for more information)





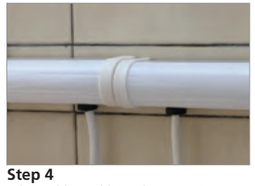
Installation

Installation Example - Pre-made Single Color Standard Versions

Step 1
Mark the desired position on the intended mounting surface and the location of the mounting holes to be drilled.

Step 2
Drill Mounting Holes

Step 3
Secure the fixture using appropriate hardware according to local building codes.



Step 4
When adding additional sections in a line ensure that there is a 3mm space between each tube to compensate for normal material expansion due to heat variations.

Step 5
Connect the wiring and connect to power.

Installation Example - Separate Linear LED Duralight(tm), Aluminum Channel, and PC Cap Type

Step 1
Secure Aluminum Channel Profile onto the intended mounting surface with the appropriate mounting hardware according to local building codes.

Step 2
When adding additional sections in a line ensure that there is a 3mm space between each channel section to compensate for normal material expansion due to heat variations.

Step 3
Insert the connecting pin into the LED Duralight™ and pull the power supply wire through the end cap. Connect power connector and the LED Duralight™ making sure of a proper connection and seal the connection with silicone to make watertight.

Step 4
Push the LED Duralight™ starting from the direction of the power wire into the channel molded into the Aluminum profile with even pressure.

Step 5
Insert the Milky White PC Cap.

Step 6
Apply the end cap and seal with silicone.

Applying a right angle (L) Type connector

Step 1
Fix the 'L' connector and the channel on the wall.

Step 2
Press the body of the duralight into the center of the channel.

Step 3
Cover the 'L' connector onto the corner of the channel.

Step 4
Insert the cover of the light onto the channel, and slide it to connect to the corner fixing unit.

Step 5
Put on the end cap and seal with glue.

Accessories and Controllers

Installation Accessories and Controllers

L1 Right Angle Connector Assembly

L2 Exterior Corner Connector Assembly

L3 Interior Corner Connector Assembly

SRC-181-V2.07 SRC-191 Controllers (For RGB 4-Waire Type) See Page# 414-419.

Low Voltage Tube Transformers See Page# 414-419.
